| Tools needed: | 6mm Allen wrench |

Removal of Stock Seat:

Tug the front of the stock seat up firmly to disengage the seat from the front mounting pin, then lift the seat up and back to remove it from the motorcycle.
Installation of Mustang Seat:

1. If installing both solo and passenger seats, the passenger seat must be mounted first. Position the passenger seat on the fender so the front black bracket aligns with the two threaded holes on either side of the large stud on the front of the fender, and the chrome rear bracket aligns with the rear fender mount.

2. Secure the passenger seat to the fender using the three supplied 8mm x 15mm buttonhead screws.

3. Holding the solo seat parallel to the frame, engage the solo seat’s rear bracket with the fender stud.

4. Ensure the rubber grommet aligns with and engages the frame stud behind the tank, and press firmly down at the nose of the seat. This is a pressure-fit connection. Ensure the seat is secure before riding the motorcycle.

Enjoy the comfort and custom look of your new Mustang seat!
